The Control Quadrant is a pedestal mounted control console which is manually operated by the pilot to control engine power, propeller condition, wing flap position, gust lock and propeller synchrophasing functions. The Seals described in this package protect the inside chamber of the Control Quadrant from dust, water, moisture and debris. They allow the knob levers to be moved smoothly without impeding motion. All Seals in this package are flat gasket type articles, and are intended to assemble horizontally under the top cover of the metal housing using fasteners.

Seginus Inc. has released the following FAA PMA replacement parts to aid in your cost reduction programs when maintaining your Saab housing Assemblies/Control Quadrants.

For additional information contact our USA offices or your regional distributor.
